

Installation Guideline

Literature Part # MNL441

Driver Event Button

Part Number:

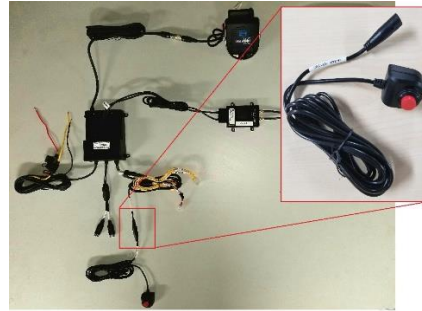

External Driver Event Button – DV441

The DVXC4 has two driver event buttons. One is the orange button on the left side of the recorder, and one external that plugs into the PDC

Some larger trucks have the recorder out of reach from the driver, so it is important to have the external button installed

TO AVOID ACCIDENTAL DRIVER EVENTS CREATED, DO NOT INSTALL THE EXTERNAL DRIVER EVENT BUTTON NEXT TO ANY VEHICLE CONTROLS

IMPORTANT: VHB tape should only be applied when windshield temperature is within 50°F-100°F (10°C-38°C) to allow proper curing of mounting adhesive pads.

With a driver event button located on the recorder (right side of the driver), it's best to place the external driver event button on the left side of the driver

Isolating the driver event button in a location such as the instrument cluster will prevent accidental pressing when reaching for vehicle controls

Make sure the mounting surface is cleaned before mounting button.

The DVXC4 includes a 3M adhesive pad to mount the driver event button. Apply pressure for 30 seconds when mounting

Do not drill holes to run the driver event button

Apply the 3M adhesive to the back of the button and apply pressure after mounting
